

Assignment 8 - Part B

13.12.2007

Due date: 10.01.2008, 10:00

In this exercise, you are asked to refactor the implementation of the Undo/Redo from Exercises 1 and 2 in part A, by using a variant of the Observer design pattern called the Model-View-Controller pattern. To this end, you should use the approach described in this [draft paper](#).

The checking interface should be the same as for Part A.
