

# Teams and packaging

- **Team naming**
  - for 2-member team: surname1\_surname2 (lower cases)
  - for 1-member team: surname (lower case)
- Place all your classes in **one single Java package** that has **the same name as the team** (e.g., `package huber_mayer;`)
- Note that the **java-package** name must match the **folder-name**
  - Example:  
src/assignment2\_int/Assignment2.java  
src/huber\_mayer/MyClass.java                      (import assignment2\_int.Assignment2;)
- Make sure that **only one class implements** the interface provided in the starter code
- Not following the above rules may hinder the checking of your assignment and may lead to a lower grade!
